Attention: ONLY ACADEMIC PURPOSES. Use these materials in isolated labs and with permission.

TLS Basics

TLS provides encrypted channels for network communication. Understand TLS 1.2 vs 1.3 differences and handshake flow.

Key Concepts

- Handshake, cipher suites, AEAD modes (GCM, ChaCha20-Poly1305), and session resumption.
- Certificate validation and chain building.

Hardening Tips

Prefer TLS 1.3 where possible, disable weak cipher suites, implement HSTS, and use certificate transparency logs.
