

Memory Forensics Guide

Hacking-zone community — Creator: Pirmaxmatov Og'abek

Attention: ONLY ACADEMIC PURPOSES. Use these materials in authorized lab environments.

Memory Acquisition

Collect volatile memory using LiME or similar tools. Preserve timestamps and record environment details.

Analysis Techniques

- Use Volatility or Rekall for process, network, and DLL enumeration.
- Search for suspicious injected threads, command lines, and network connections.

Artifacts & Indicators

Focus on process lists, network sockets, loaded modules, and extracted strings to reconstruct attacker activity.
