Attention: ONLY ACADEMIC PURPOSES. Use these materials in isolated lab environments with permission.

Overview

Mastering the command line increases productivity and empowers defenders and analysts. This guide focuses on practical commands and safe usage patterns.

Essential Commands

- ls, cp, mv, rm, mkdir, find, grep
- ps, top, htop, ss, netstat (use ss instead of netstat)
- journalctl, dmesg, systemctl for system logs and services

Tips & Best Practices

Use cautious deletion, leverage --dry-run where available, prefer piping to safe commands, and document commands you run during incident response.
