Attention: ONLY ACADEMIC PURPOSES. Use these materials in isolated lab environments with permission.

Overview

Privilege escalation refers to techniques attackers use to gain higher privileges. This document focuses on detection and mitigation rather than exploit instructions.

Common Vectors

- Misconfigured SUID binaries or scripts.
- Weak or reused passwords and misconfigured sudoers entries.
- Unpatched kernel vulnerabilities (monitor vendor advisories).
- Services running as root with network exposure.

Detection & Mitigation

Regularly scan for SUID files, audit sudoers, employ least-privilege for services, keep systems updated, and use integrity monitoring (AIDE).
