Introduction to RFID

RFID systems are widely used in inventory, access control, and identification. Understanding their attack surface is crucial for secure deployment.

Common Vulnerabilities

- Eavesdropping: unencrypted communication capture.
- Cloning: copying tag data to create duplicates.
- Replay attacks: retransmitting captured authentication sequences.
- Skimming: unauthorized reads of tags in close proximity.

Mitigations & Best Practices

Use mutual authentication, session tokens, and short-range shields. Avoid storing sensitive data on tags and perform regular audits.
